

## How do we measure wind?

### How do we measure wind?

We use special instruments to measure wind.

### Weather vane

A weather vane shows us the direction of the wind.

They are often seen on the steeples of churches.

Look up the next time you pass by a church.

### Weather sock

A weather sock tells us what direction the wind is blowing.

We often see these at the seaside.

### Anemometer

An anemometer measures how fast the wind blows.

The stronger the wind, the faster it turns around.
